»»» HERE'S HOW IT WORKS

1. PHC provides free initial consultation to discuss program to determine if this opportunity meets Home Buyer's needs.
2. Home Buyer works with Realtor to select a building lot and place conditional offer based on inspection and financing.
3. Client works with PHC to select house build plan to submit for funding approval. These documents also used for building permit.
4. Home Buyer & PHC Sign Professional Consultation Service Agreement once Home Buyer has been approved for funding.
5. Once Home Buyer is approved for funding they provide a retainer to PHC and disbursement schedule is determined at this time.
6. Once permits are approved we can schedule project start date.
7. House build commences and PHC consults and acts as Project Manager for Home Buyer's Self-Build Project from beginning to final walk through to ensure a high quality final product.
8. PHC will assist Home Buyer with the selection process of qualified professional trades to guarantee the highest standards of workmanship are met throughout the duration of project.
9. Completion is anticipated to be 12 to 16 weeks based on an average sized family home, and assuming no weather delays or unforeseen events, natural or otherwise that could cause delays. Larger and more complex home styles will require longer build times.

➤➤➤ STANDARD QUALITY HOME FEATURES
