

**play!** Problem Solving: Grouping [Part 1]

1. There are 6 apples which Anna must pack equally into 2 bags.

How many apples must be packed into each bag?

$$\underline{\quad\quad} \text{ apples} \div \underline{\quad\quad} \text{ bags} = \underline{\quad\quad} \text{ per bag}$$

2. There are 8 apples which Jane must pack equally into 4 bags.

How many apples must be packed into each bag?

$$\underline{\quad\quad} \text{ apples} \div \underline{\quad\quad} \text{ bags} = \underline{\quad\quad} \text{ apples per bag}$$

3. There are 12 apples which John must pack equally into 3 bags.

How many apples must be packed into each bag?

$$\underline{\quad\quad} \text{ apples} \div \underline{\quad\quad} \text{ bags} = \underline{\quad\quad} \text{ apples per bag}$$
