

play! Problem Solving: Capacity Part 2 [\div]

1. Dad has a certain number of 3ℓ buckets.

He calculates that the total capacity of the buckets is 9ℓ.

How many buckets does Dad have?

$$\underline{\quad} \ell \div \underline{\quad} \ell \text{ per bucket} = \underline{\quad} \text{ buckets}$$

2. Mom buys a 30 litres of water in total.

If she bought 5ℓ bottles, how many bottles did she buy?

$$\underline{\quad} \ell \div \underline{\quad} \ell \text{ per bottle} = \underline{\quad} \text{ bottles}$$

3. How many 20ml spoonfuls of cough syrup can be poured from 120ml of cough syrup?

$$\underline{\quad} \text{ ml} \div \underline{\quad} \text{ ml spoonfuls} = \underline{\quad} \text{ spoonfuls}$$

4. How many 20ml spoonfuls of cough syrup can be poured from ½ ℓ of cough syrup?

$$\underline{\quad} \text{ ml} \div \underline{\quad} \text{ ml spoonfuls} = \underline{\quad} \text{ spoonfuls}$$
