

WASTE OIL DRAINER

The document describes waste oil draining equipment used for vehicles. These devices are designed to safely collect used oil from engines, gearboxes, and other vehicle parts. They include features like anti-splash protection, adjustable components, and hose holders to make oil draining easier and cleaner. The equipment comes in different types (such as floor and pit drainers) with a typical capacity of 65 liters. It also includes safety warnings, especially not to use flammable or corrosive liquids.
