Minimal use of water during its automatic cleaning cycle makes Protech self-cleaning filters the premier industry choice for irrigation applications.

Protech irrigation water filters in golf, turf and landscape environments are most effectively placed nearest to the discharge of the main pump, typically thriving with a degree of filtration from 100-500µ. Protech self cleaning filters easily integrate into a variety of pump station configurations. Pump station filter replacements are easy with flange-to-flange matching available at no additional cost.

TYPICAL APPLICATIONS:

- Spray Nozzle Protection
- Drip Irrigation Protection
- Secondary/Tertiary Effluent
- Lake Water Filtration
- Well Water Filtration
- Canal Water Filtration
- Pond Water Filtration
- Pump Station Filters

AGRICULTURAL IRRIGATION SUPPLIES – FILTERS

Irrigation methods in modern agriculture are numerous. Each farm sources water according to its environment, be it from springs, wells, rivers, lakes, reservoirs or from such non-conventional
