

CALYPSO

The *Calypso* super luxury cruiser is the latest addition to the Wilds' range of boats. Built from the most advanced materials and to the very latest design and specification. Throughout this family size cruiser you will find excellence without compromise. It incorporates all the luxury amenities available to modern boat building, including a unique hydrostatic drive system. You and your family will enjoy comfort and luxury in this exciting new boat.

Waterproof nylon carpeting is fully fitted throughout the interior. Contained within the extra large open-plan stateroom there is ample seating accommodation for entertaining, relaxing and dining. A TV point is standard. Fully sliding picture windows allow maximum light and all round visibility. These large windows have toughened glass within anodised aluminium frames. The whole interior of the craft is fully insulated and can be centrally heated throughout by warm air.

Wall areas are in teak veneer panelling or thermoplastic material. You will find the aft cabin restful, comfortable and luxurious. Twin 6 foot berths with 6 inch sprung mattresses can be converted into a double berth, complete with padded headboard.

Running the complete length of the cabin is a dressing table shelf, below which is a nest of drawers. To complete the storage, there is a hanging locker.

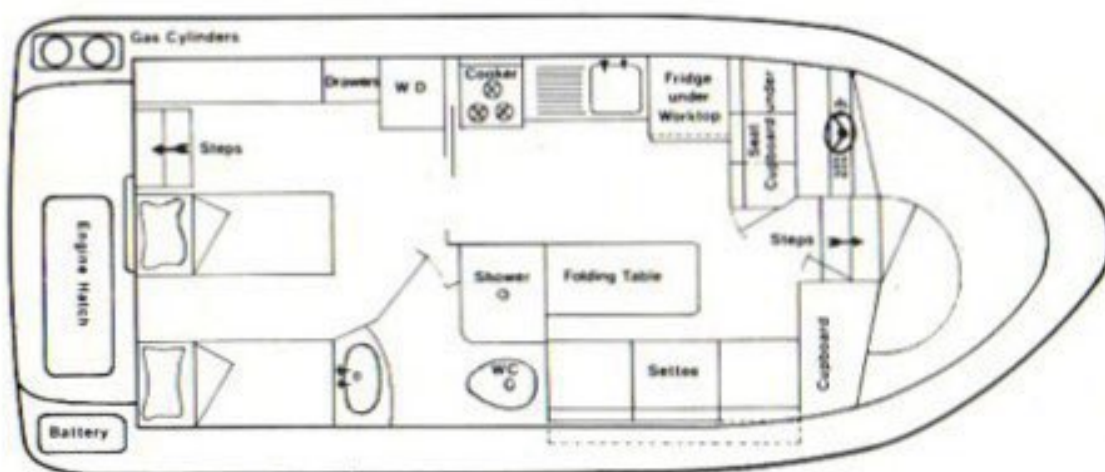

The toilet compartment has a fitted washbasin and a choice of a chemical holding tank or recirculation type toilet. An optional extra is the shower unit with safety mixer valve and tray. There is a fitted electric pump for emptying the shower water. All wall surfaces are thermoplastic covered.

The large well-equipped galley has everything you need for preparing gourmet meals or quick snacks. It is equipped with a modern gas cooker with two rings, oven, grill and pan. In addition there is a stainless steel household size sink unit, with cupboards and cutlery drawer below. A full size gas refrigerator is available as an optional extra. All working surfaces are thermoplastic covered to ensure hygienic conditions. The hull and superstructure are formed from super moulded glass reinforced plastic. There is a fore and aft cockpit for sunbathing, fishing or just lazing! This is a convenient area for access to and from the vessel and well placed for ease of mooring. A standard feature of the superstructure is the large sliding sun roof. This has been designed for ease of opening and

closing by the introduction of nylon rollers.

Minimum maintenance is the key note. The GRP hull is resilient but amazingly strong and requires little more than occasional hosing and wiping down. The Perkins inboard diesel engine is situated at the rear of the craft making maintenance extremely simple. The unique hydrostatic drive system, which is very quiet in operation, allows instant speed and gear selection without stalling, ensuring immediate response.

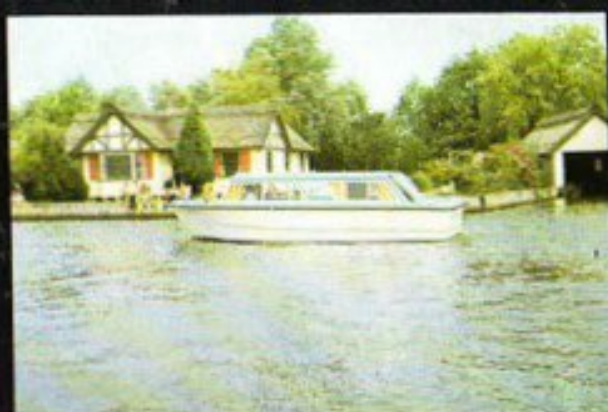

CALYPSO
