

# FLEET MANAGEMENT SYSTEM AUXIL

## PURPOSES

- Improving mining safety through fatigue monitoring
- Reduction of loss-of-control incidents
- Reduction of mining operational costs

➔ High-quality system alerting. The system tracks the trend and triggers an alert at the specified fatigue threshold

➔ False alarms are minimized

➔ Reporting on incidents and the dynamics of 'micro-sleeps'

➔ Reporting on discipline violations (unfastened seat belt, use of a phone while driving)

Camera installation

On the left is the field with the latest active events. In the center is the working menu with a priority notification for dispatcher processing. In the right window are the equipment units on which fatigue events are starting to be recorded. Filters at the top allow you to configure the required functionality

## COMPONENTS

- High-resolution industrial video camera.
- Cable for connection to the AUXIL system.
- Software for the server and the onboard devices.
- AUXIL system equipment with standard precision positioning.

## MINING ART

- **Availability** - We use hardware in our solutions that are openly available on the market, which reduces the overall project cost and simplifies subsequent maintenance.
- **Reliability** - All equipment comes with a manufacturer's 1-2 years warranty. Our software meets 99.9% SLA requirements.
- **Flexibility** - Our software is open to modifications tailored to your business needs. You can make adjustments independently.
- **Transparency** - Forget about subscription fees for technical support and services. You pay for the provided services only.
- **Experience** - Since 2015, we have been developing and implementing our own software solutions for the mining industry.
