INTRODUCING THE F. B. WILDS

CARIBBEAN CLASS

LUXURY PASSENGER CARRYING CRAFT

Wilds
CARIBBEAN CRUISERS

The F. B. Wilds "Caribbean" class passenger carrying craft which is illustrated above, provides the optimum vehicle for the conveyance of passengers on excursions of long or short haul duration within smooth or partially smooth waters.

Developed from the well proven 39 ft. "Caribbean" Cruiser, in which thousands of holidaymakers have, in craft of this class, sailed the inland waterways of the United Kingdom and the Continent, the craft provides seating accommodation for up to 60 passengers.

Built under strict supervision in G.R.P. to Lloyds and D.T.I. Class 5 Passenger Certificate Regulations, the craft is propelled by a Hydrostatic Drive Unit which is situated at the front of the craft. Power for the Hydrostatic Drive Unit is provided by a Marine Diesel engine and final drive is via a rear mounted hydraulic motor and three-bladed bronze propeller. Conventional Drive arrangements to customers choice.

The advantages of the Hydrostatic Drive are: quietness and smoothness in operation; ease and simplicity of control and that it is efficient and reliable in service.

This craft offers a spacious interior and the single level floor facilitates passenger circulation particularly when boarding or alighting. The illustration, right, which is of the interior looking aft, gives a clear indication of the luxury and convenience afforded by this very fine craft.
