

ABOUT STEENCORE

Steencore is a global natural resources company founded in 2011. Its diverse portfolio is built on nonferrous metals such as copper cathodes, cobalt and concentrates, but includes other hard commodities like bulk ore in bauxite, coal, iron ore and manganese. Steencore's international network and partnerships provide a unique level of access to local knowledge and expertise that provides our clientele with a secure avenue to accessing prime commodities.

OUR PERSPECTIVE

In addition to their international commodities network, Steencore brings a unique perspective to international finance. Based upon decades of experience and subject-matter-expertise, the Steencore team provides innovative financing solutions to complement its secure and stable commodities portfolio.

OUR APPROACH

Steencore's core philosophy and approach to international commodity trading is one based upon the cyclical nature of the market. Understanding and insight of the opportunities the cyclical nature of the market offers, enables Steencore to quickly ascertain and capture the growth in demand and pricing. The resulting investment strategy is focused on the optimal development point of the supply chain, in order to optimize risk-adjusted returns.
