Figure 1: Distribution of PLWHA by County, 12/31/14

Figure 2: Distribution of PLWHA by AIDS and HIV (Not AIDS) within County

Figure 3: Distribution of PLWHA by Gender within County

The percent of female PLWHA in the EMA has declined from 40% through 2010 to 37% as of 2014.

Figure 4: Distribution of PLWHA by Age Category

Figure 5: Distribution of PLWHA by Age Category within County

Percent of PLWHA Age 45+ by County:

Essex 69% Union 69% MSW 74%

Figure 6: Distribution of PLWHA by Race/Ethnicity within County

Figure 7: Distribution of PLWHA by Exposure Category in Newark EMA

Heterosexual exposure is the leading mode of transmission EMA-wide followed by Men who have Sex with Men (MSM) and Injection Drug Use (IDU). MSM replaced IDU as 2nd leading cause in 2013. In 2014 MSM is the leading cause among males, for the first time in 15 years.

Figure 8: Distribution of Male PLWHA by Male Exposure Category Within County

Figure 9: Distribution of Female PLWHA by Female Exposure Category Within County

Figure 10: Distribution of PLWHA by 5 Largest Cities and Rest of NEMA

72% of the EMA's PLWHA reside in its five largest cities. While this is a decline from the 74% in 2011, the total number of 9,894 PLWHA including 5,830 in Newark is very high. Resources must still be targeted to these five cities.

Table 2: PLWHA in EMA's Five Largest Cities

| City | PLWHA | % NEMA |
|-------------|--------|--------|
| Newark | 5,830 | 41.8% |
| East Orange | 1,462 | 10.5% |
| Irvington | 989 | 7.1% |
| Elizabeth | 1,183 | 8.5% |
| Plainfield | 540 | 3.9% |
| TOTAL | 10,004 | 71.8% |

TRENDS in HIV/AIDS Data 2005 to 2014

Note: NJ Dept. Health did not publish HIV surveillance data by county and municipality ("county and municipal statistics") for year ending 12/31/2011.

Findings Re Trends

- Total PLWHA The HIV epidemic in the Newark EMA continues to increase annually to 13,958 as of 12/31/14.
- Gender The percent of female PLWHA is declining within the total epidemic from 40% in 2009 to 37% in 2014. Male percentage is increasing, as the EMA's epidemic is slowly becoming like the state and national epidemic.
- Race/Ethnicity The epidemic consists of a majority (87%) of racial/ethnic minority population. However, the demographics are shifting. As a percent of PLWHA, there was a decline from 74% to 67% among African Americans and an increase from 14% to 20% among Hispanic/Latinos 2005-2014. There has been no change among NonHispanic Whites and Other.
- Age The EMA continued to experience an aging epidemic, with 35% of PLWHA age 55 or older and 69% older than age 45. PLWHA age 35-44 dropped from 32% of the epidemic in 2006 to 17% in 2014. However, the younger PLWHA remained constant with those age 25-34 at 10% of PLWHA and Youth age 13-24 at above 3% of PLWHA. Pediatric cases are 0.3% of the epidemic.

Transmission Mode

- Males The transmission mode for males has changed dramatically in the Newark EMA. The leading cause in 2005 at 31% Heterosexual has dropped to #2 at 29% in 2014. The 2nd leading cause IDU dropped from 29% in 2005 to 19% in 2014 and is 3rd. In 2014 the leading transmission mode is MSM at 33%, up from 23% in 2005.
- o Females There has been minimal change in transmission mode for females from 2005 to 2014. Heterosexual remained #1 rising from 60% to 65% and IDU at #2 declined from 29% to 21%. The decline in IDU corresponds to trends among males and the decline in injection drug use in the EMA. The substance abuse epidemic continues in the EMA, but primary methods of use are snorting, sniffing and other non-injection modes.
- Geography The epidemic continues to slowly spread outside of Essex County to Union County and the Morris, Sussex, Warren region. From 2005-2014, the percent of NEMA PLWHA in Essex County declined from 74% to 71%, increased in Union from 19% to 21% and increased in the Morris, Sussex, Warren region from 7% to 9%.
