

THE ZEIN GROUP HOLDING
COMPANY

Welcome to Our Presentation

We present to you this presentation that includes a modest feasibility study for the project in all its aspects in terms of financial comparison, profits, and other important aspects for every company intending to invest in the project.

About Our Project

We have created a voice payment gateway for financial institutions that allows receiving cash payments. The gateway works alongside electronic payment gateways and allows recording the transaction via voice and then proceeding to pay or deposit cash using voice from a distance of meters on a contactless Voice Banknote Machine™, which embodies simplicity and security, and eliminates the need for complex cashier devices and programs that require a lot of employees and expenses, and are far from keeping pace with the age of technology and artificial intelligence, where cash cannot be abandoned, at any stage of the future, neither near nor distant.

Project Profits

The project can increase your company's profit margin and reduce expenses at the same time, in terms of reducing congestion and misunderstandings caused by employees in the traditional way, as the project provides an attractive value for your customers from a speed perspective.

DEFINITION:

50% PROFIT

The project saves more than 50% of your company's profits per year, in terms of reducing administrative and operational costs.

Target Market

The project targets both specific and multiple categories, such as financial companies that have merchant clients, multi-branch money transfer companies, multi-branch shopping stores, multi-branch restaurants, and many government institutions, telecommunications companies and businesses that require reduced congestion and speed and ease in cash payment operations.

Project Investment

The project can be invested at the level of your organization to reduce the burden of administrative and operational costs, or the project can be invested at the level of your merchant customers if you are a bank, for example, to provide an ideal and modern method of cash payment by voice.

PROJECT
SUCCESS

Payment Technology Growth

VOICE PAYMENT GROWTH

Voice Payment Market Overview

Voice Payment Market Size was valued at USD 6.2 Billion in 2022. The voice payment market industry is projected to grow from USD 6.8 Billion in 2023 to USD 16.1 Billion by 2032, exhibiting a compound annual growth rate (CAGR) of 11.2% during the forecast period (2023 - 2032).

SELF-SERVICE GROWTH

The global self-service technology market is expected to grow at a compound annual growth rate of almost 14% from 2023 to 2030 to reach \$92 billion by 2030

Beneficiary Companies

FINANCIAL COMPANIES/BANKS

Financial companies such as banks benefit from providing an ideal payment service to merchants from their clients and charging monthly profits or a percentage of the total profits.

SHOPPING STORES

Shopping outlets such as retail stores and grocery stores benefit from providing an optimal cash payment service to their customers, reducing expenses and congestion.

RESTAURANTS

Restaurants of all types, from fast food to upscale, benefit from providing an ideal cash payment service for their customers, reducing expenses and congestion.

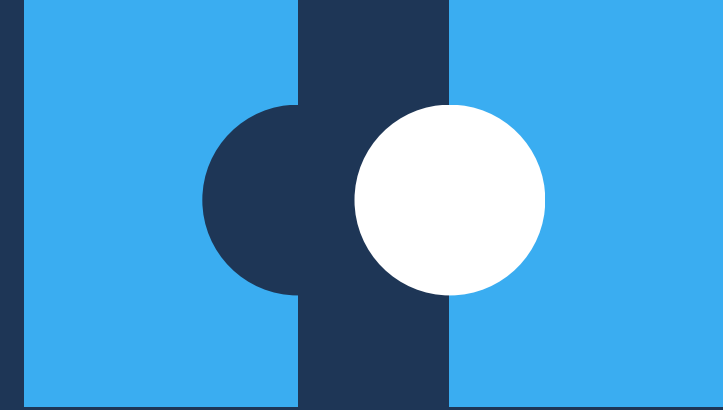

Conclusion

Finally, we have shown the difference in this modest presentation between the administrative and operational expenses of the traditional method of dealing and its burdens, and the advanced and developed project method in reducing costs by a high percentage for the forest, attracting customers and increasing profits.
