The Zein Group Holding Company

Paying has never been easier.

Give your customers a unique experience by digitizing their transactions by testing the Voice Banknote Gateway® and paying through the machine with their voice, and embody simplicity and security for them, in a future that does not dispense with banknote.

Get Started

Project Details

We have created a voice payment gateway for financial institutions that allows receiving cash payments. The gateway works alongside electronic payment gateways and allows recording the transaction via voice and then proceeding to pay or deposit cash using voice from a distance of meters on a contactless Voice Banknote Machine™, which embodies simplicity and security, and eliminates the need for complex cashier devices and programs that require a lot of employees and expenses, and are far from keeping pace with the age of technology and artificial intelligence, where cash cannot be abandoned, at any stage of the future, neither near nor distant.

The Zein Group Holding Company

Project Overview

THE FIRST SIDE

The core of the project is to display endpoints by saving a voiceprint , managing invoices and receiving payment or deposit confirmation from the smart device.

THE MIDDLE SIDE

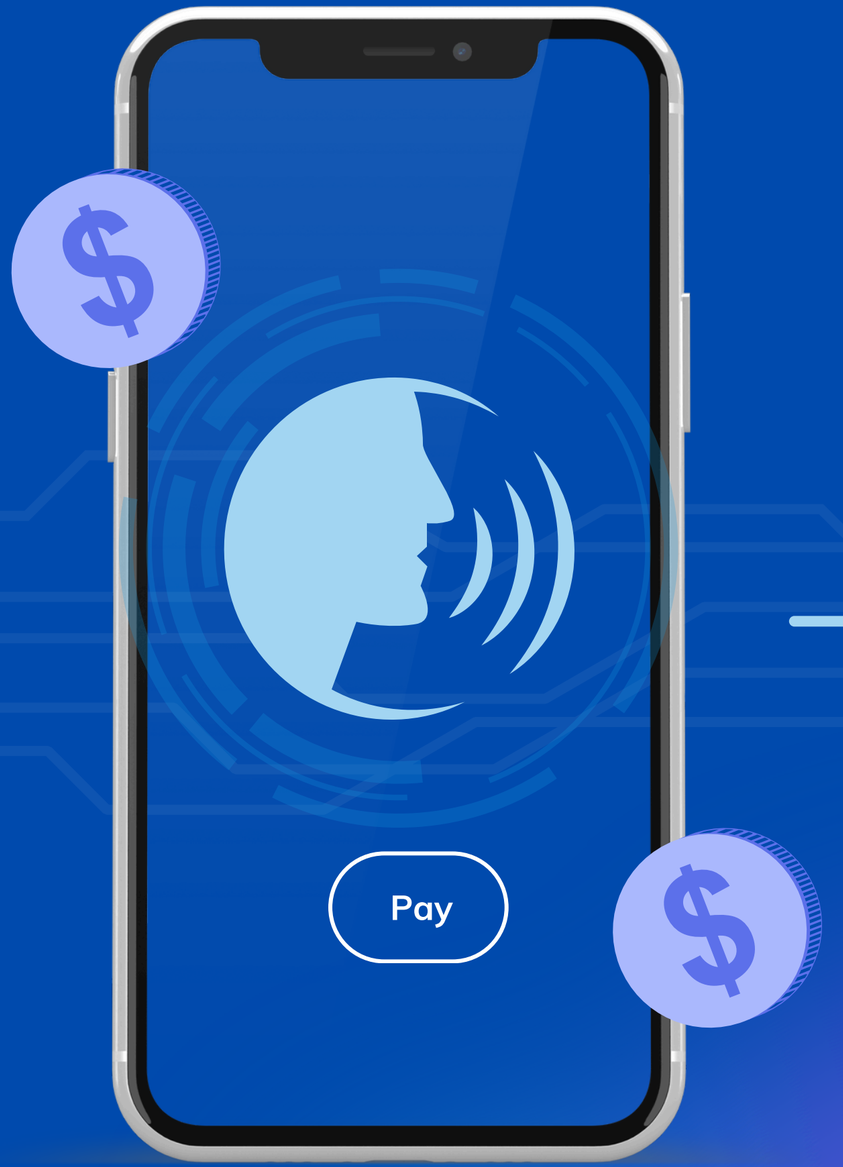

Use EF Core for database interaction to store and update invoice information, payment statuses, and transaction logs.

THE LAST SIDE

The system allows creating products with QR code for merchants to act as an automated POS.

Digitization

Immerse yourself in the cutting edge of technology in e-transactions and voice-based payments, from voice recording to voice recognition and payment, see how these innovations are redefining traditional cash transactions to make them similar to digital payments, enhancing security and speeding up interactions. Today, mobile phones are more widely used than ever before, making e-transactions and the shift to voice-based payments in banknote via machine a more pressing need than ever in our time.

Security Features

Ensuring Trust

The security system provides strong encryption measures that make the voice payment system a fortress for financial transactions. The voice payment gateway uses advanced encryption technology, which creates a secure tunnel to transmit voice data and saves it in the database in an encrypted, unreadable form and protects it from any misuse. After the voice biometric authentication and the completion of the banknote payment process through the machine, the system destroys the encrypted voice from the database for more peace of mind for the customer and the user at the same time in terms of security for the customer and saving space in the database for the user.

Innovation in telecom industry

Digital transformation is essential, so we have come up with a way to not give up cash and use artificial intelligence to our advantage, thanks to voice recognition technology, we have made the process of digitizing cash transactions and payments or deposit using voice more seamless and secure, making us focus on keeping up with the technology era and providing seamless communications.

Future Trends

Digital payments are the competition for financial companies, take a look ahead to making cash payments similar to digital payments which is set to redefine the landscape. Discover how these innovations are expected to revolutionize the way we handle financial transactions, eliminating the need for human interaction and congestion and transforming cash payments into an innovative, seamless and secure way.

Redefining The Scene

Take a look at the redefinition of the landscape. Imagine this: Your customers can fill out applications and forms, make transfers and deposits from the comfort of their cars or homes, or alternatively, send invoices to your customers. All of this is available to your customers with one click to record the transaction digitally with their voice print using their phones, and go to the nearest Voice Banknote Machine™ to deposit. This is a revolution in the way people deal with financial transactions, eliminating the need for human interaction, congestion and misunderstandings.

The Zein Group Holding Company

Integration with Daily Life

Engage your customers in the integration of digital and physical payments into the fabric of everyday life. Give your customers a simplified shopping experience where cash transactions are fast, secure and contactless for the first time. Whether they are shopping or enjoying a meal at their favorite restaurant, they simply scan the QR code of the product and pay in cash easily and seamlessly using the voice payment gateway with the flexibility of a few meters away.

Voice Banknote Machine™

A medium-sized cash and cheque acceptance machine similar to a small credit card reader, this is what we have achieved through innovation through a smooth design and features that include voice recognition, intercom, and speed in payment and deposit transactions.
