OPTION 01 VISUALS; not to scale

SPORTS PAVILION:

A semi-permanent facility that uses 'cabin' structures to form a complete development including changing rooms for players & officials, social space, office & toilets across two stand alone units.

The cost effective nature of these buildings makes them hugely efficient, whilst the off-site manufacture allows for minimal wastage during construction, less time spent on site & controlled quality in terms of finish.

Single storey to reduce visual impact & timber clad to link to the green context & dense tree planting adjacent, this design solution goes some way in easing concerns of local residents.

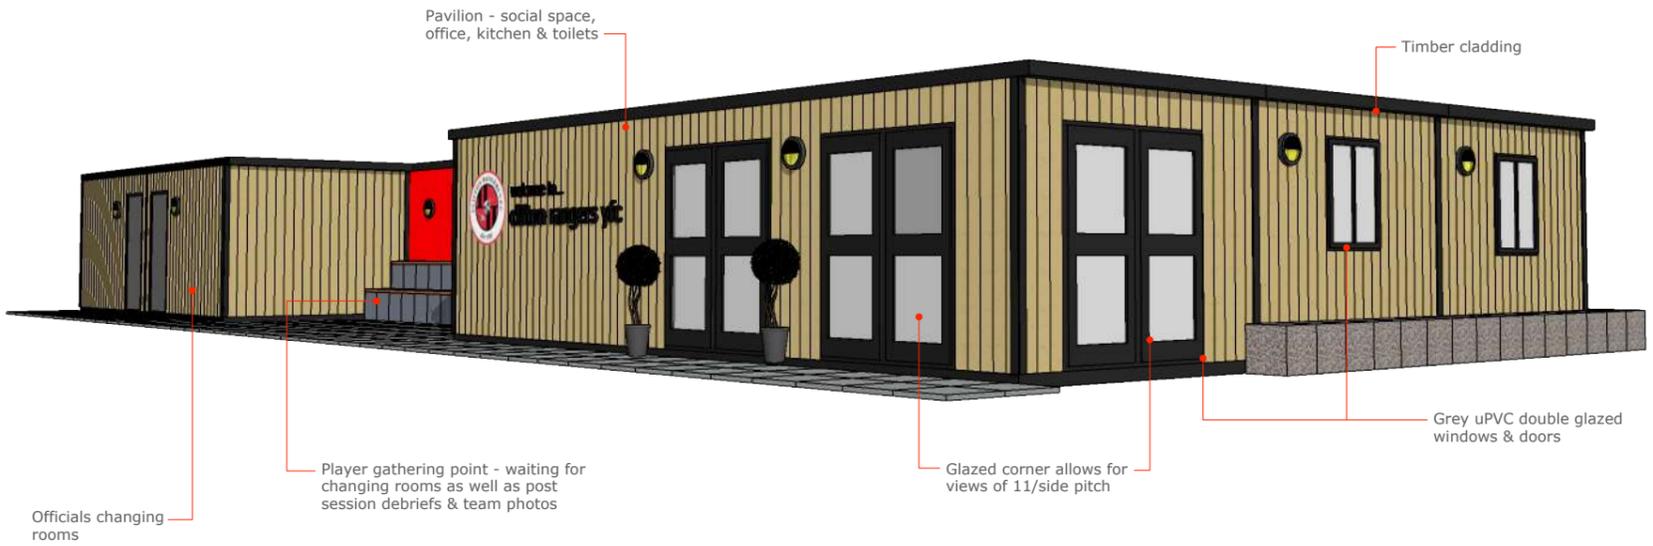

Identity is created using subtle inclusion of club colours as well as logos & branding on facades.

TIMBER CLAD CABIN EXAMPLE 01

TIMBER CLAD CABIN EXAMPLE 02

External Walls Western Red Cedar

Our Red Cedar cladding is made from a lightweight, durable wood which lasts 15-25 years. The timber is reddish-brown which after exposure to the weather turn a soft green. Walls are insulated with 'Superglass 36' insulation, giving excellent thermal performance, and is classified as having zero Ozone Depletion Potential & Global Warming Potential.

Windows

All windows are Black UPVC Double Glazed c/w Trickle Vents and Restrictors but vary in size depending on the size cabin you prefer.
