

**CHIEF ENGINEER - M/F**  
**Fr/En**

Offer reference0007cind\_mp

## **ONE SA IS RECRUITING IN CAMEROON**

The Chief Engineer, the individual will play a vital role in the successful execution of this significant iron ore mining project. This professional will be responsible for leading the engineering department and overseeing all engineering-related activities for the project's two-phase development plan.

### **Key Responsibilities**

- Develop, implement, and oversee engineering strategies for the two-phase development plan of the Project.
- Coordinate with a multidisciplinary team of engineers, geologists, environmental scientists, and other professionals to ensure the effective design and implementation of engineering operations.
- Oversee all engineering projects, initiatives, and processes to ensure alignment with project goals.
- Ensure engineering operations and activities are compliant with local, state, federal laws, and regulations, as well as international engineering best practices.
- Collaborate with the Mining and Logistics departments to ensure the effective mining and transportation of iron ore. This includes contributing to the transportation process, which will involve road transport in Phase 1 and rail transport in Phase 2.
- Identify potential engineering challenges, devise effective solutions, and implement these to enhance efficiency and safety.
- Develop and maintain a comprehensive documentation system for all engineering activities, including reports, charts, and presentations. These documents will be used to inform stakeholders about the progress of the project and provide data for future projects.

### **Qualifications**

- Bachelor's degree in Engineering. A Master's degree or relevant certification, such as a Professional Engineer (PE) license, would be an advantage.
- Significant experience in an engineering leadership role, ideally within the mining industry.
- fluency in spoken and written French and English.
- In-depth understanding of mining operations, processes, and best practices, with a focus on efficiency, safety, and environmental responsibility.
- Proficiency in engineering software systems, including software systems used for project design, planning, and monitoring.
- Exceptional analytical and problem-solving skills. The ability to make data-driven decisions and use predictive analytics to foresee and mitigate potential issues is essential.
- Excellent communication and leadership skills. The ability to communicate effectively with various stakeholders, including vendors, contractors, and internal teams, is crucial.

**FIRST NEVER FOLLOWS**

**Personal Attributes**

- Detail-oriented and highly organized. The role involves managing complex operations and requires a meticulous approach.
- Strong team player with the ability to lead and motivate a team. The Chief Engineer must foster a positive and collaborative work environment.

Excellente maîtrise du français et de l'anglais à l'oral et à l'écrit.

- High level of integrity and dependability. Transparency, honesty, and reliability are crucial in this role.
- Proactive in identifying issues and implementing solutions. A forward-thinking approach can help prevent problems before they occur.
- Strong customer service mindset. The Chief Engineer should always strive to meet and exceed the expectations of both internal and external stakeholders.

As the Chief Engineer, the individual will work closely with other departments and partners to ensure efficient and safe engineering operations, contributing to the successful execution of the Project.
