Floor & Masonry Coatings

HASCO's large range of industrial floor coating paints offer solutions suited for a wide range of requirements. Be it a busy shopping mall, an underground parking garage, an outdoor sports court, or a heavy machinery storage facility, HASCO provides the right system for your job.

Properties such as extreme chemical resistance, high impact strength, high compressive strength and thermal shock resistance are just some examples of properties HASCO flooring paints provide to insure an excellent service life, designed specifically for the project at hand.

Ease of application is also an important aspect HASCO chemists take into consideration when designing products, thus helping applicators achieve high productivity without any compromise to product quality.

The variety of high performance epoxies, Polyurethanes, Acrylics, along with hybrid resin systems are available to choose from within HASCO's main line of floor coatings.

HASCO Epoxy Based Floor Coatings

HASCO provides a diverse epoxy floor coating line. This includes crack and joint fillers, brush-able and spray-able epoxies, and self-leveling solvent free coatings.

HASCO **EPOSEAL 50**

Transparent Epoxy sealer, with penetrating solvents, provides a seamless coat over concrete, as a base coat for various floor top coats. HASCO EPOSEAL 50 also protects the integrity of concrete and prevents

dusting, and chemical degradation. Available in a moisture forgiving version, when humidity is present in concrete.

HASCO **EPOSEAL 100**

A solvent Free Epoxy sealer, used over highly porous concrete to provide a seamless seal even over degraded, uneven surfaces. Due to its odorless nature, and zero VOC content, applicators are able to use it

in confined areas. HASCO EPOSEAL 100 can also be used as a self leveling clear coat, especially over 3D printed floor designs.

HASCO

EPOXY SF 260

Solvent Free, %100 solid Epoxy Self-Leveling compound used over suitable sealers to provide self leveling floor coating up to 1 cm in thickness. HASCO

EPOXY SF 260 provides very high mechanical, chemical and abrasion resistance, and can withstand very high pressure loads due to its extreme compressive strength.

HASCO

EPOXY CHEMODUR (70)

available in Solvent Free or a %70 solid version. HASCO EPOXY CHEMODUR is applied by roller or airless spray to provide a protective surface over suitable sealers

to thicknesses up to 500 micron. The final result is a chemically resistant, seamless floor coating, with high abrasion and mechanical resistance.

RAL & PANTONE COLORS AVAILABLE FOR ALL HASCO FLOOR COATING TOPCOATS

HASCO

CRACK FILLER 100

Epoxy pouring putty, used to fill gaps, expansion joints, construction joints and as a general filler for floor imperfections. Its minimal shrinking properties mean that filled gaps remain flush with the entire floor, providing beauty and functionality to the flooring system.

FLOOR COATINGS ACRYLIC BASED

HASCO's line of one-component solvent-based and water-based acrylic coatings, offer versatile, easy to apply, flooring paints that are suitable for application on concrete, stamped concrete, plastic and metal floors in both clear and pigmented options. HASCO's one component Acrylic coatings offers contractors a flexible, weather stable, easy to use paint, especially designed for external conditions. One component solvent-based Acrylics are known for their high weather resistance, anti-carbonation & anti-dusting properties. The result is a non-saponifiable final film that is resilient, and easy to repair.

HASCO CHEMOLAC ROAD MARKING

One component, solvent-based, cold apply, thermoplastic road marking and airfield marking rated paint according to TT-P85-E certification. HASCOTON CHEMOLAC ROAD MARKING provides a hard wearing, highly reflective film

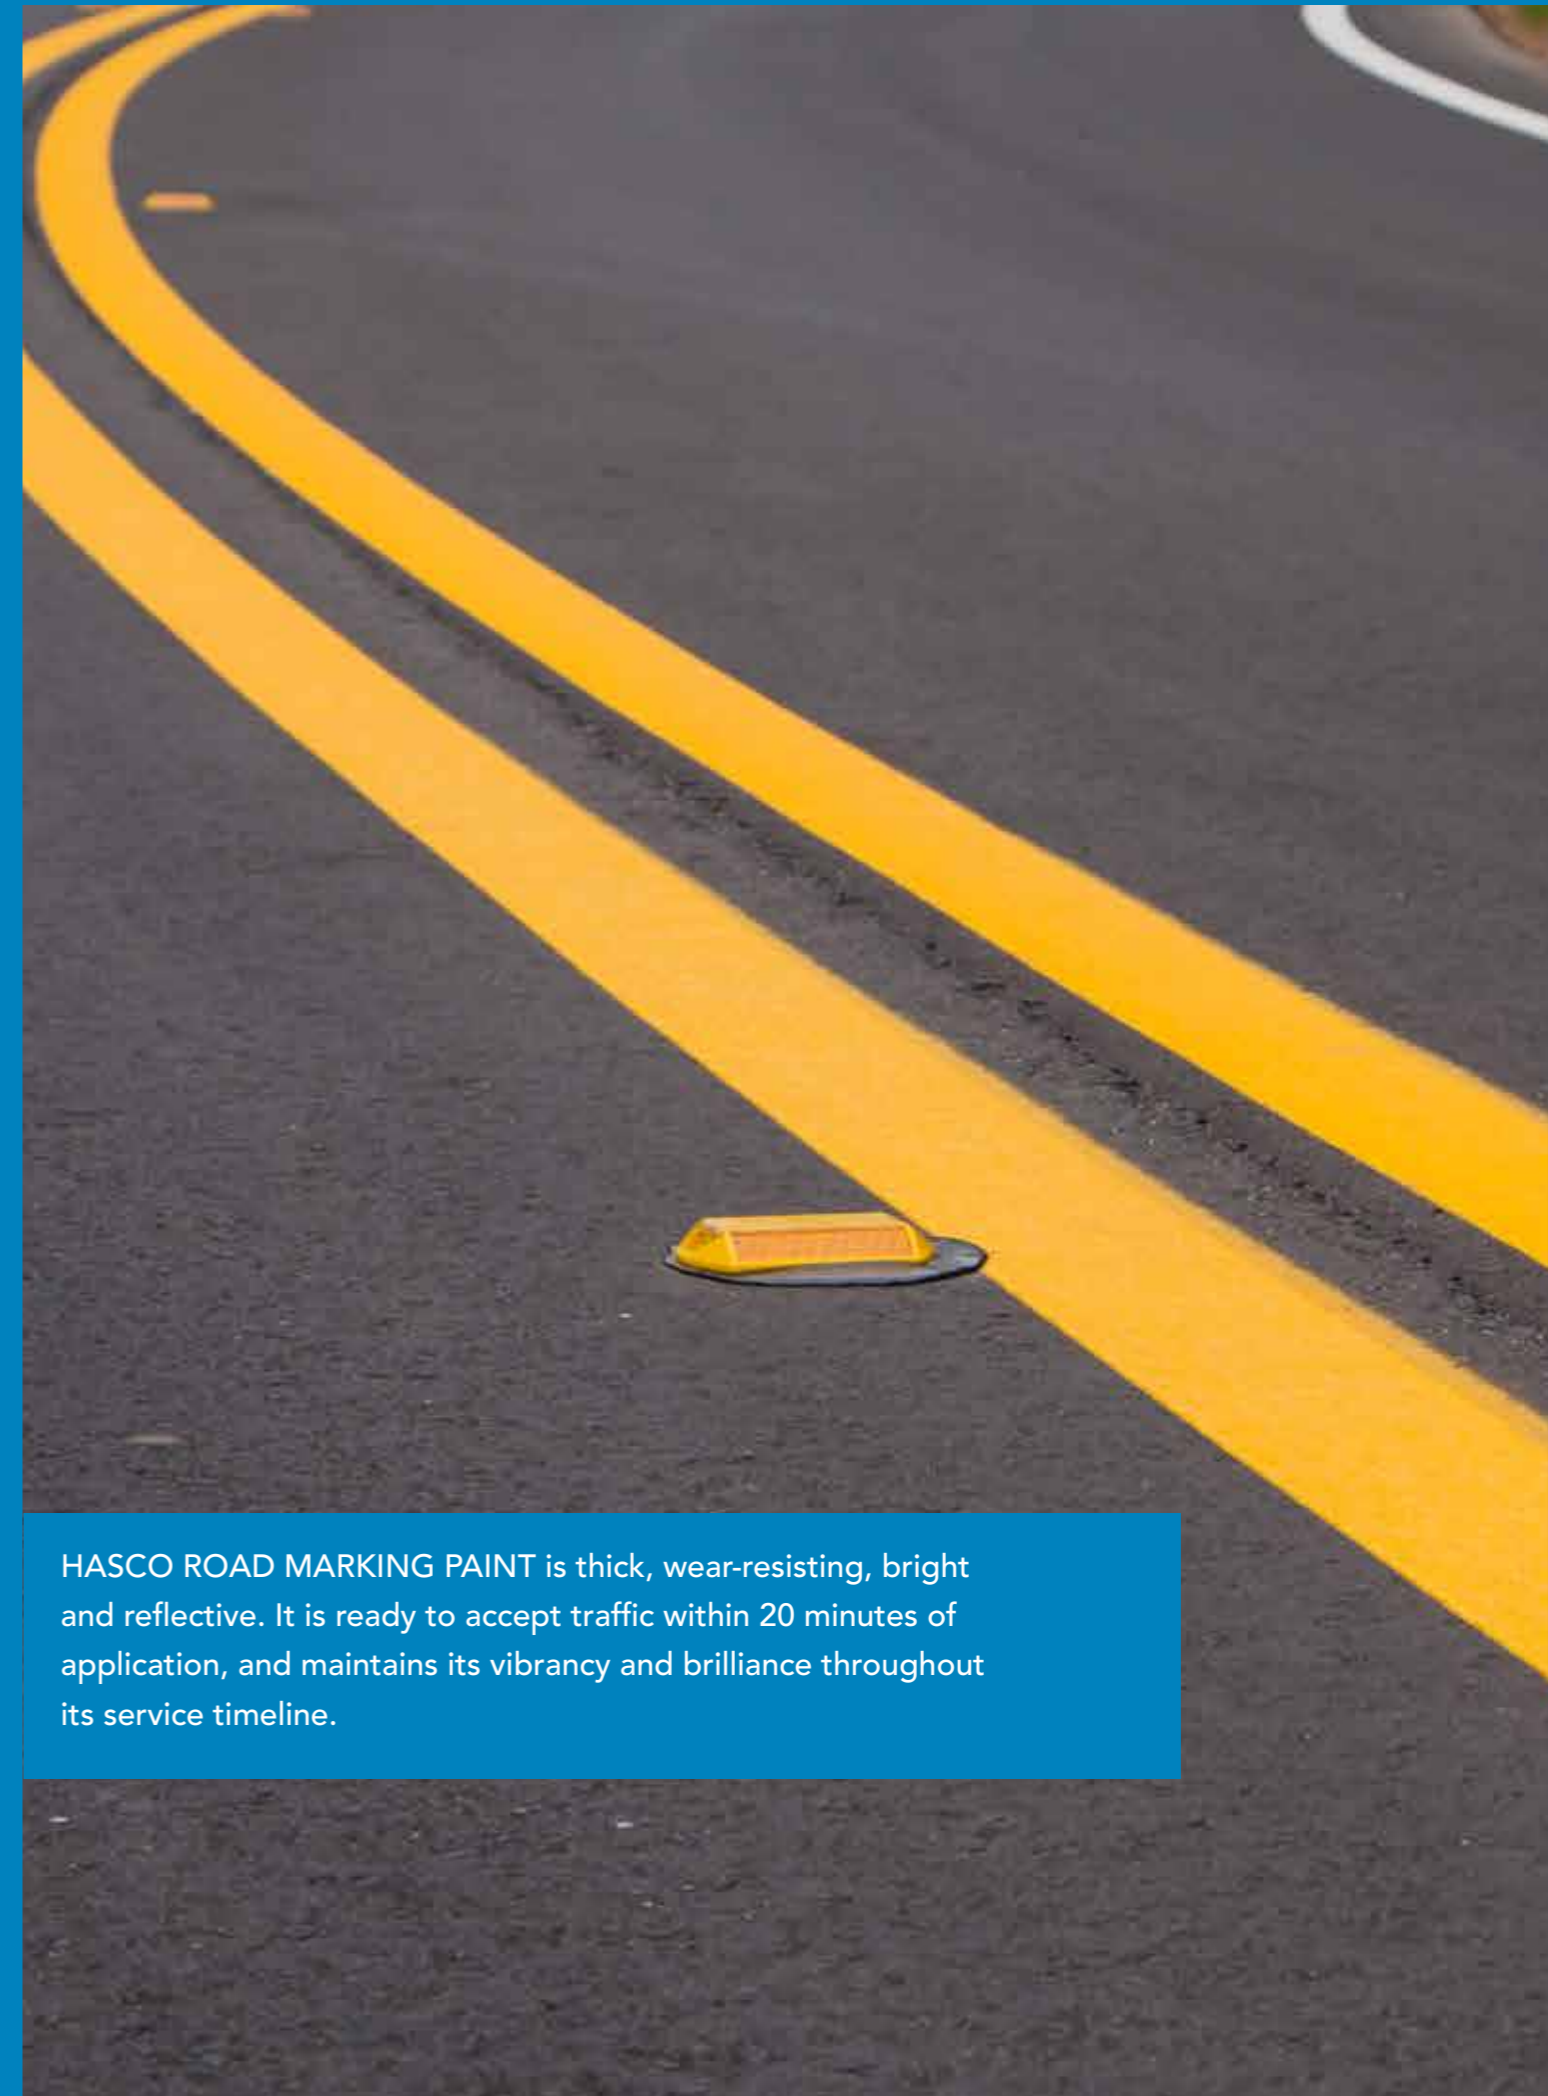

that is glass bead accepting. Applicable over concrete, asphalt and bitumen surfaces.

HASCO

ACRYSEAL 25/50

One component, solvent based Acrylic clear coat especially suitable as an anti dusting, anti staining protective coat for concrete and stamped concrete for interior and exterior use.

HASCO ROAD MARKING PAINT is thick, wear-resisting, bright and reflective. It is ready to accept traffic within 20 minutes of application, and maintains its vibrancy and brilliance throughout its service timeline.

CONTENTS

HASCO

MASONRY

Coatings

HASCO provides special coatings to protect buildings and construction materials including masonry gypsum board and cement.

HASCO

HASCOTON CHEMOLAC

Vinyl Acrylic, solvent based, self-priming topcoat. Suitable for most building material and cement substrates as a non carbonating, weather stable, long lasting coat.

HASCOTON CHEMOLAC provides a breathable exterior grade topcoat. That is not affected by water, and weather conditions. This makes it particularly suitable

for marine environments as well as damp interior spaces. A three coat system of HASCOTON CHEMOLAC provides long lasting protection for up to 20 years, far exceeding conventional water-based exterior grade coatings.

HASCO SILCOSEAL

Clear Silicon coating based on a combination of Silane and Siloxane resins which bonds with most building material to provide a water and dirt repellent sealed surface. The effects of a 2 coat application of HASCO SILCOSEAL, can last up to 15 years, providing a very economical, long lasting protection to buildings and facades.

HASCO

LIQUICLEAN 25

Water-based all-purpose, ionic, non-ionic, biodegradable cleaner. HASCO LIQUICLEAN 25 can be mixed with up to 14 parts water, and provides a food safe, aluminum safe, highly

effective cleaner and degreaser. HASCO LIQUICLEAN 25 is also suitable to clean road marking paint, and cautionary signs.
