SECURCEN® 1.0

Euroxway was founded in Italy in 2007 and evolved into Srl in 2015. Since 2016/2019 it is the owner of the patented system **SECURCEN® 1.0** for the traceability of the deceased in crematoria.

In 2023, Euroxway Srl went on to develop and launch **SECURCEN® 2.0** which specialises in enhancing the original product by allowing it to be custom-made and installed in the same way across Crematoria, Funeral Directors premises and hospital mortuaries.

SECURCEN® 2.0

SECURCEN® 2.0, was launched at the beginning of 2023.

The system uses RFID microchips and is able to trace the deceased from location of death (home or hospital) through the entire process within a Funeral Directors premises to a crematorium or cemetery. This can provide comfort to bereaved families – particularly those who engage in a Direct Cremation - but it also acts as an important management tool to provide traceability and accountability across an operation. This is particularly valuable for larger organisations but it can be used by operations of any size.

Often, the deceased will have to travel and be moved across several processes and locations between death and point of final disposal. The system allows the deceased to be traced throughout each process along with any individual staff member involved in supporting this journey.

Every activity, and every individual is fully accountable with timed and traced involvements being logged at each stage of the process. Essentially, it provides a fully automated digital trail of the deceased journey.

This technology provides a third-party certification system, which tracks individual journeys and staff performance to underpin operator processes, and support the daily operations at hospital mortuaries, funeral homes, crematoria and cemeteries.

SECURCEN® 2.0 for Hospital Mortuaries

The system can be used to provide a fully traceable, automated system to track all deceased arrivals and departures with full accountability of all employees involved.

SECURCEN® 2.0 for Funeral Directors

The system can be used to account for all movements from pick up from home or hospital through every process throughout the preparation for a funeral (removal, dressing, coffin fitting, viewing, movement between different premises etc.)

SECURCEN® 2.0 for Crematoria

A fully automated, traceable system to track all movements after the funeral ceremony through the cremation process. While this process is currently traced via a paper system in all UK crematoria, this allows for a fully automated alternative to provide greater transparency on process / staff efficiency. Final pdf documents can be printed at the end of the process.

SECURCEN® 2.0

SECURCEN® 2.0 for Bereaved families

The system can be used by bereaved families (offered by FDs or crematoria) to trace their loved ones movement throughout the funeral preparation process and cremation. This provides a new level of transparency to the client which in the wake of certain recent reported incidents (Legacy Funeral Directors) could provide greater client confidence. This is particularly attractive to a client who has decided to buy a Direct Cremation as every movement could be traced and viewed to provide greater comfort to the family.

Benefits of SECURCEN® 2.0

SECURCEN® 2.0 - Patented system for funeral structures (Funeral Home and Crematoria) or hospitals that uses RFID technology for the traceability of the deceased and his/her cremated remains.

SECURCEN® 2.0 monitors each step, unambiguously *checking and certifying* the transfer of the bodies and the various steps, both ritual and technical, during the entire funeral / cremation process.

SECURCEN® 2.0 can be used in any funeral facility, from to the cemetery and, upon request, it can be integrated into the accounting/service booking systems of the Funeral Director / Crematorium to avoid the need for duplicate information needing to be added.

SECURCEN® 2.0 allows to control all the follow-up actions of the process within the funeral structures with a single software, common regardless the country involved but adaptable to the language used locally.

SECURCEN® 2.0 can be *managed in the Cloud* via WIFI of the crematorium / funeral facility involved, with dedicated smartphones (supplied by Euroxway Srl) or even with an APP that can be installed on smartphones normally available on the market.

SECURCEN® 2.0 allows the managers of large funeral groups to be in *full control of all processes*, even in different countries, to facilitate daily operations and the *exchange of staff among facilities* and to standardise and simplify the training involved to become proficient in using the system.

SECURCEN® Implements close monitoring of security procedures during the process:

- The acceptance and handling of the coffin in the facilities concerned (with *all its passages*).
- The Identification of the body, in its funeral wake, cremation or burial (with *all its passages*).
- The collection and processing of cremation remains (*in all steps*).
- The urn delivery to the family even if kept at the crematorium for years.

Some advantages of using the SECURCEN® traceability system:

- Identify the body, casket or container and ascertain its location as it moves from the morgue to the cemetery.
- Receive the date, the start/end time of all procedures, the deceased's data and the data of the operators involved.
- It inhibits any "counterfeiting" or "forcing" of mandatory procedures in the work scheme.
- Virtually adaptable to any methodology used in the structures involved.
- Installation of non-invasive devices and without perceptible blockages of day to day operations.
- Non-stop control, processing and data storage both locally and / or remotely (*in the Cloud*).
- The devices are certified with industrial standards in compliance with the CE regulations.
- Respectful of the privacy of funeral staff, the deceased and their families.
- The system and associated equipment is easy to use

SECURCEN® - Operating in Europe from 2018:

- **SECURCEN® 2.0** operates in several countries and has **supervised more than 248,000 cremations** since its first installation.

SECURCEN[®] patented by EUROXWAY® SRL

PATENTED SYSTEM FOR THE TRACEABILITY OF THE DECEASED
AND THEIR ASHES USING RFID TECHNOLOGY.

DATA RECORDING OF THE DECEASED IN THE SECURCEN[®] SYSTEM

IDENTIFICATION OF THE DECEASED AT THE PLACE OF DEATH

ARRIVAL OF THE DECEASED IN THE STRUCTURE

IDENTIFICATION OF EACH ENVIRONMENT IN THE STRUCTURE

FULL CONTROL OF TECHNICAL EQUIPMENT

ASH PROCESSING

DELIVERY OF THE URN TO THE FAMILY

CEMETERY

SECURCEN[®] patented by EUROXWAY® SRL
