

What Is An LRV

LRV is a universal version for 'contrast'. Legislation (Equality Act 2010) requires that all new and refurbished public buildings and work places comply with current regulations via their 'Access Statement', ensuring safe entry, exit and safe passage throughout the building. Therefore, the contrast between, for example, floors and walls must achieve a certain level – measured by something called Light Reflectance Value (LRV). LRV is measured on a scale of 0 to 100, 0 being perfect absorbing black and 100 being perfect reflecting white. A minimum of 30 points LRV difference is advised for adjacent surfaces.
