

# Sustainability Pledge

We are aware that our products are used in on-going environments and that our customers will wish to know about their sustainability.

Stair Nosings have three main components. The base carrier, the safety slip resistant insert and the adhesive tape binding them together.

The base carrier is almost always Aluminium, which is long lasting and is 100% recyclable.

The insert is hard wearing and if maintained properly will last for many years. This can also be up to 95% recycled, returned to crumb and re-used in other products.

The adhesive used to bind both parts together is water based acrylic and measured in microns which therefore has minimal impact, any residue is absorbed in the recycling process.

We as a company are aware that we have an impact on the environment. The company applies a strategy for recycling our inbound packaging materials first by us and then any unusable excess by compacting and return to a recycling centre. Many of our supplies now come on returnable/reuseable pallets.

The company also has a strategy to improve sustainability or reduce our environmental impact. In this respect alternative systems, methods or equipment are assessed for sustainability. Recently we have reviewed our lighting and started to introduce LED lighting.

We are constantly striving to improve the company's environmental footprint.
