# QVLx

# Qualified Vendor Services

**Supercharging development teams with world-leading embedded systems expertise and today's best-in-class technology offerings**

Today's technology-driven world depends on maintaining the functional integrity of a diverse range of of critical embedded systems. Safety and security are two hands that carry these systems through to mission success. In order to provide made-to-order technology services, QVLx Labs specializes in three premier software product lines. These vendors have outstanding pedigrees and continuously lead innovation in the real-time safety and security domains.

QVLx lends subject-matter expertise on the following technology offerings from Blackberry Limited, Wind River Systems, and Lynx Software Technologies:

| Blackberry | Wind River | Lynx |
|---|---|---|
| ‣ QNX® Neutrino® | ‣ VxWorks® / VxWorks® 653<br>‣ Wind River Helix™<br>‣ Wind River Linux<br>‣ Wind River Simics® | ‣ LynxOS®<br>‣ Spyker™ System Trace |

Qualified vendor products power billions of devices across a multitude of industries. By working across multiple vendor teams, QVLx designs customer systems using objective considerations that result in exceptionally refined deployments. If there is sufficient budget, it is recommended to upgrade and future-proof previously fielded systems. There are some situations where hybrid designs are optimal or cases when vendor products not listed above are applicable.

QVLx Qualified Vendor Services bring passion, extensibility, and elegance to the world's embedded systems projects. This value-add is often further synergized with members from a large network of trusted partners. This network includes hardware manufacturers, on-target verification providers, static analysis providers, debugger providers, system modeling providers, and other organizations. Additionally, QVLx Qualified Vendor Services professionals aid customers in the selection of hardware based on price-performance ratio, security capability, multi-core determinism, and other requirements.

Qualified Vendor Services reinforce embedded systems development by supplying experience, confidence, and personnel. Proficiency is delivered through remote consultation and field engineering.
