# ShaliPlast® PCE 200

High Performance Poly-Carboxylated Ether Based Superplasticiser

## **Description**

**ShaliPlast PCE® 200** is a third generation Poly-Carboxylated Ether based super-plasticizer for lower and medium grade concrete and mortar. It is an additive for concrete, mortar and plasters. It conforms to IS 9103 – 1999 and ASTM – C494 Type G. It also complies with IS: 2645: 2003 as an integral waterproofing compound.

#### Characteristics

Colour	Light Browinsh	Specific Gravity, 30 °C	1.05 ± 0.04
рН	6 - 8	Chloride Content	Nil
Dosages, by weight of cementitious material, %		0.5– 2.0	

# **Application**

**ShaliPlast® PCE 200** is especially suitable for the production of concrete mixes which require high early strength development, high water reduction and excellent flow-ability.

- For ready mix concrete.
- · High workability concrete.
- Precast concrete.
- Fast track concrete.
- In situ concrete requiring fast stripping time.

### **Advantages**

- Pronounced increase in the early strength development, resulting in very economical stripping times for precast and in situ concrete.
- Extremely high water reduction, resulting in high density, high strength and reduced permeability for water etc.
- Excellent plasticizing effect, resulting in improved flow-ability, placing and compacting behavior.
- Higher cohesion reducing risk of segregation and bleeding.
- Improved shrinkage and creep behavior.
- Free from chlorides or other ingredients promoting corrosion of steel reinforcement. It is therefore suitable for reinforced and pre-stressed steel.
- It is compatible with all types of Portland Cement including SRC (Sulphate Resistance Cement) and Cement Fillers / substitutes like PFA, GGBFS and Micro Silica.. Always conduct trials before combining products in specific mixes and contact our Technical Service Department for information about specific combinations.

# **Application Methodology**

- Add **ShaliPlast**® **PCE 200** to the dosing water or added with it in to the concrete mixer. It should not come into contact with dry cement.
- **Dosing:** Charge all concrete material in the proper order into the mixer with about 85% of the mixing water and mix for appropriate time. Add rest quantity of water with admixture to obtain the required slump and mix for additional 2 3 minutes.
- Overdosage may cause delay in setting time of concrete.
- **Formwork**: Forms for walls or narrow sections must be watertight, strong and must have good bracing. During the "Flowing period" the concrete will exert a higher pressure at the base of the form than conventional concrete. Form work for slabs is the same as for conventional concrete.

# **Health & Safety**

- Avoid contact with skin / eyes and avoid swallowing.
- Ensure adequate ventilation and avoid inhalation of vapour.
- Wear suitable protective clothing, gloves and eye protection.
- In case of skin contact, rinse with plenty of clean water, then cleanse with soap and water. Do not use solvent to clean the contacted area.
- In case of eye contact, wash with plenty of clean water and seek medical advice.
- If swallowed, seek medical attention immediately. Do not induce vomiting.

## **Packing**

Available in 250 kg barrel.

# **Storage**

Keep in cool and dry place, under shed, away from heat.

#### **Shelf Life**

12 months in original unopened condition.

## **Product Range**

■ Waterproofing and Insulation ■ Road Surfacing
■ Sealants and Additives ■ Pipeline Coating
■ Protective / Anti-Corrosive Coating ■ Epoxy Flooring
■ Grouts / Admixtures ■ RestoFix- Repair / Rehabilitation
■ Other Construction Chemicals
