

## Statement of Pleasure: ThinkPot

I have always wanted to perform scientific excellence in each field of life, one of them including academics & research in the exact sciences and natural philosophy. I was lucky & fortunate enough to witness & experience a lot of great scientific activities- many in person & many online. Here, I wish to create a journal to explore & record my musings of the sciences, to satisfy myself & create interesting scientific recreation for the audience.

Fusion of the wet biology with the mathematical fascinates me. As a highly materialistic individual, I have had more mechanical interpretations of the sciences & life in general. It has slowly and with hurdles, dawned upon my head, the real interpretations of them. It is the Big Bright World that is assuringly inviting me to explore. This level of enticement is not imaginable for the naturally wet lab, dissective or ecological souls of typical biologists. But, for me, it is invaluable. My pursuit of the spiritual & religious, has interacted with the modern, to land me here via the divine grace. I now have some degree of scientifically assured faith in them and their friendship & the altruism of the cosmos.

My journey has imparted me huge amount of grace from my family, advisors & friends in addition to the supernatural. My most favourite activity was to discuss & debate the science, and anything in general, to prove myself. I get motivated to do the appropriate to prove my selfish self, inter alia. It could be a great engine to evolve when practiced with care, for example, preventing some harmful hybrids between the divine & the selfish while progressing.

I have studied biology for many years, and always found interdisciplinary biology (biophysics, bio-mathematics & -statistics, computational biology, theoretical biology) as very interesting. Origins of Life & Evolution were the best branches according to me since junior college days. So, general & theoretical Origins of Life, Evolutionary Biology & Ecology, was the field of my choice for pursuing academic and research activities, in my capacity. I have also tried to pursue philosophy of science as an interest. I value a complete & all-round scientific knowledge, ability & aspiration & thus have included other sciences in the ThinkPot.

I pursued prolonged personal scientific academic & research projects, which yielded invaluable benefit to me personally. ThinkPot represents the ambrosia that we are scientifically faithful, hopeful & hapful to consume, actively with force or intensity, or passively, or with their complexes of varied order & integration. I plan to write lively articles covering the sciences & create evaluations. I also wish to include explorations in the general & theoretical Origins, Evolution & Ecology- their literature reviews & personal research.

Thus, as the InkPot logo represents, ThinkPot encompasses the sciences & specialization in general & theoretical Origins, Evolution & Ecology. This is to facilitate my evolution & recreate with the universe. I am thankful for your company while this process & pray for the inevitable positive.
