STEEL BRIDGE "SIRIOS"

DESCRIPTION:

The project is located at the 43rd km on the motorway Athens-Lamia, consist of two main buildings situated on either side of the motorway and serves as a passengers service station. The two buildings are linked with a steel truss bridge which crosses over the motorway, and apart from access between the two buildings, provides also restaurant and other rest facilities for the passengers. The steel bridge has spans over 55m and has a total width of 19m. The twin trussed girders bear via elastomeric bearing of reinforced concrete abutments which are part of the building structure.
