

Do2gGet

1st Report

By the end of the 1st term of application of the Do2Get Guidebook, the mentors have registered the following aspects:

- 39 students have established their objectives and defined an action plan in October 2023;
- In January 2024, although students have done great improvements, more than a half are still working to accomplish their objectives;
- Most students have realized that their successes depend on their dedication and work and try to do it. But some other students still have no motivation to commit themselves and make the necessary efforts to reach their objectives;
- Other students (about 10%) aren't motivated at all to pursue their objectives; they lack responsibility and willingness to achieve their goal.
- Some have improved some skills like concentration, focus and attention while are still lacking them.
- Many students try to accomplish their action plans but they don't use their guidebook to take notes about their actions or progress.
- Other difficulties felt by mentors:
 - a. Having time enough (and quality time) to be with the student and explore properly the guidebook with him; this project should be included in the teachers' weekly timetable;
 - b. Having more than one student to work with;
 - c. Having the adequate room to work with the student, besides the classroom.
