

# Introducing the Alert IV

Designed for 24/7 monitoring of soil moisture conditions in the field, bog or greenhouse. Ideal for growers who need up to the minute conditions in order to determine proper irrigation procedure.

- Access your field, bog or greenhouse conditions remotely via phone, laptop or computer
- Prevent crop damage by over or under watering
- Collect and store data via Harvest Watch portal
- Alerts user for any pre set condition - too wet or too dry
- Mobile and easy to deploy
- Relays information as soon as it's set up and activated
- Powered by LED batteries and charged via solar panel
