

QUATTRO

New cooling shroud

We are pleased to present our EOS Quattro model 2025. It is equipped with a new cooling system. Instead of the oil cooler we will use a carbon fibre cooling shroud for all engines delivered from the beginning of 2025.

This new cooling shroud is more efficient on a paramotor frame than the current oil cooler system. We have been testing this new system for six months. The tests showed that the cylinder head temperature drops by about 30°C and the oil temperature by about 15°C and it saves 0,7 kg of weight.

We can provide an update kit and – if still needed - the oil cooler.

Also some other small modifications have been made to improve the reliability of our EOS Quattro.

EOS Quattro model 2025 is ready to order – delivery in January 2025!
